

BRE invite you to join us at the Workshop on Sustainable Construction in Myanmar

# Sustainable Construction in Myanmar

The purpose of this workshop is to discuss ways stakeholders working in government, academia and industry in Myanmar and the UK can work together to share knowledge and best practice in sustainable construction. This would be of particular use with regard to informing the potential development of Myanmar's policies, regulations and standards (such as Myanmar's Green Building Code).

The workshop will help to identify opportunities and challenges for delivering sustainable construction in Myanmar and also explore any overlap in policy and regulations and Myanmar with international best practice and benchmarks.

To book a place contact Tim Wiseman at [tim.wiseman@bregroup.com](mailto:tim.wiseman@bregroup.com)

*Supported by the BRE Trust and the Myanmar Green Building Committee.*

The output of this workshop would be an Action Plan on what needs to be done to implement sustainability in Myanmar and the development of the Myanmar's Green Building Code and the barriers which need to be overcome. This would support a 'roadmap' showing the way forward in terms of improving the code.

Another purpose of the workshop is to introduce BREEAM, BRE's Environmental Assessment Method, which is a holistic certification scheme for the built environment.

We would like to get feedback on the scheme regarding barriers, drivers and opportunities to using BREEAM in emerging markets such as Myanmar as well as sharing learning and implementing best practice.

**Saturday 8 December**

**Myanmar Engineering Society  
MES Building, Hlaing Universities Campus,  
Hlaing Township, Yangon, Myanmar**

**13.00: Welcome**

**13.30: Introduction to BRE  
and the BRE Trust**

**13.45: Overview of Sustainability  
BREEAM and CEEQUAL  
Myanmar Green Building Code**

**14.45: Break**

**15:00: Open Forum and  
Facilitate Discussion**

**16:00: Feedback**

**17:00: Close**
